Zomato Exploratory Data Analysis

| Votes > 500 | Has Online |
| Delivery |
| No Online | Rating >= 4 |
| Delivery |
| Rating less |
| than 4 |

This project does an exploratory data analysis of restaurants listed in a renowned food delivery platform called Zomato.

Size of bars on the lat-long coordinates spread across continents are proportional to the number of votes given to a particular restaurant by customers.

Color of bars are representative of how the restaurants are rated based on customer ratings, such as Average, Excellent, Good, Not rated, Poor, Very Good.

Towards the right, three charts are shown which are self-explnatory.
